## CHANGING TIMES

As was mentioned in the last newsletter, the inevitable has begun to happen, and some of us have started acquiring new computers. The ZX81 or Timex 1000 was for most of us our first computer, and will probably remain an object of love for some time. However it will eventually pass out of production, and we will all be on to the next generation. Timex has announced it is going out of the business, while Sinclair in England has just unveiled a mouthwatering new product, the QL (Quantum Leap), which we are told will be selling in North America later this year for \$500 US.

Any computer group which sticks resolutely to only recognizing one model of computer is fated to obscurity in time, so it behooves us to open discussion on the future of the club. Clearly we will have to start supporting other machines as well as the ZX81/TS1000, and the question is which ones? How wide should we spread our attentions?

We should have no intention of abandoning the 81/1000's. Most of us still have a great deal to learn about them, and will want to keep learning for some time. But we will want to take on some new machines as well. One obvious route is to stay with the Sinclair family; another is to branch out into other makes, staying with modestly priced machines. Perhaps we will do both.

It has been suggested that we might make overtures to other computer groups about joint meetings, and reciprocal memberships. This would enable our members who also own other machines to attend sessions on those machines while the rest of us continue to milk the maximum out of our Sinclairs. It would also give the rest of us the opportunity to see what else is going on in the world of tiny computing.

I personally would encourage the idea of joint meetings, on either a regular or itinerant basis, with groups like the Vancouver Island MicroComputer Society. We could, for example, take side-by-side classrooms in a school one evening, and move back and forth.

Perhaps this approach would be a good way of providing our members with the benefits of branching out, without actually watering down our own efforts in support of our main machine. This would be a valuable topic to throw around at the upcoming meeting.

On the subject of our own meetings, I would like to suggest that we try and have a Basic tutorial session scheduled for every meeting. It need not involve everyone, but I strongly suspect that there are few of us who would not listen in anyway, to pick up some tips. It will probably mean dragooning members to stand up and give us 5 or 10 minutes of what they have discovered or learned on their own. Noone will be spared!

Julian Greenwood.

NOTICE OF NEXT MEETING Thurs. Apr. 12, 1984, Bee-Gee's 7:PM

---

UNREPORT OF UNMEETING: Sec's Report, March 8, 1984.

Our last monthly meeting at Bee-Gee's was of a style we should follow more often. We did not have a business meeting. Our President Dave Skaalrud had just resigned, our V-P was in California, Director Karen Petts was unavailable, I was late, Director Bob Clark expected to be late. In the result Director Stu Montgomery drew the short straw and had to work double duty. He called us to order (to start an informal forum), and soon afterwards had to leave to go on to his job.

Of most significance to me was that members were first interested in Dave's resignation, and secondly in the news of Timex' retirement from computers. These were emotional concerns. The forum was open for any topic, but software enquiries and programming help took a back seat.

Computing is a human activity, and we should not forget that! Reflecting on that I think that some members may feel themselves in need of some discreet help in showing their desire to learn. Perhaps those that have specific questions could put them in writing at the meetings so that we can discuss them in front of the membership.

The Directors met and appointed Julian Greenwood to fill the interim vacancy on the Board left by the shift of Dave Curry to President. Stu Montgomery is in the process of being railroaded to V-P, but he missed the meeting!

Dee.

The REGISTERED ADDRESS of the Victoria Sync Association is  
942 Cloverdale Ave., Victoria, B.C., V8X 2T6.

President	David Curry	743-9260
Sec. Treas.	Dee Shoolingin	c/o Victoria Sync. Assn.
Director	Stu Montgomery	478-6350
Director	Bob Clark	384-7410
Director	Karen Petts	656-5879
Director	Julian Greenwood	383-2073

Committee Chairmen

Education	Tom Caron	385-2866
Displays	Alison Gunn	479-8618
Machine Code	Dale Bird	592-5058
Librarians	Dave Curry	743-9260 (Cobble Hill)
	David Skaalrud	656-5879 (Royal Oak)
Newsletter	Dee Shoolingin	388-5464 #107 (msg.)

Membership is \$10.00 per year, which includes subscription to the newsletter. Regular meetings are held on the second Thursday of each month.

ADVERTISING RATES

-Full page: \$40. Half: \$20. Sixth: \$10. Bus. card size: \$5  
-2X line ads (32 spaces): \$0.40 or 3/\$1.00  
One dollar minimum, except members, who also get \$1 discount per classification. Bona-fide job ads are free to members or non-members on a first come/ space available basis. (computer help-wanted ads may get preference)  
All ads must be accompanied by payment (Cheques payable to the Victoria Sync Assn.) and submitted camera-ready (2X print-out or typed) two weeks or more before the second Thursday of each month.  
When possible, ads will be CLASSIFIED as Work Wanted, Help Wanted, Trade/Swap, Wanted to Buy, For Sale, Play, etc.

VICTORIA SYNC ASSOCIATION - MEMBERSHIP APPLICATION

Please provide the following information :  
Name, address, postal code, telephone number(s), optional age & gender and other info about yourself which you want us to know.  
We also want to know what equipment you have, your experience and special interests. Enclose your dues of \$10.00.

Send to Victoria Sync Association, 942 Cloverdale Ave, Victoria B.C., V8X 2T6, or present at meeting.

# MACHINECODE CORNER

## by Craig Bird

One of the slowest things about the Sinclair is its printing. Recently I was working on a program in which I had to have very large shapes moving around the screen. Well, needless to say the program was incredibly slow. So, I developed the program I have for you this month. This program will let you define up to 8 shapes each 4 characters wide and 4 characters long, then the shapes can be printed anywhere on the screen as fast as it takes to print only one character. The program has 3 separate routines:

1) This program will let you define a shape. To define a shape you must print the shape in the upper left corner of the screen, then use `RAND USR 16510`. There can be up to 8 shapes defined. To select which shape to define, a number from 0 to 7 must be `POKEd` into 16417. For example the following program will define a box shape to the 1st shape:

```
10000 POKE 16417,0
10001 PRINT " "
10002 PRINT " "
10003 PRINT " "
10004 PRINT " "
10005 RAND USR 16510
```

2) This program will print one of the 8 shapes anywhere on the screen. `POKE` into 16417 a number from 0 to 7 for which of the shapes is to be printed. This program is used by `RAND USR 16514`. When this program is used, the shape will be printed at the current print position on the screen. EG the following program will print shape number 1 at 10,10 on the screen:

```
10 POKE 16417,0
20 PRINT AT 10,10;
30 RAND USR 16514
```

3) This program will replace the just printed shape on the screen with blanks. It is much easier and faster to use this program instead of several `PRINT` statements. The program is used by `RAND USR 16516`.

USE the program in listings one to type in the numbers in listings two one at a time reading from left to right. After all the numbers have been typed in, all lines except line 10 can be removed. Any program that uses the machine code in line 10 can now be typed in.

Included with this program is a simple game in basic below. to use the game, type in the lines in the BASIC listings below, but be sure line 10 has already been typed in by using the program in listing one. The idea of the game is to prevent the space ship coming down at you from reaching the bottom of the screen by positioning your square over it then shooting it. After you destroy it, or it reaches the bottom you will be scored. It is a simple game, but it can be used as a example of the possible uses of the machine code "shape table" program described above. To use the game, use the cursor keys for the directions, and the 9 key to shoot the space ship.

I need help! I am running out of ideas for programs for this column. If you have a simple program you would like me to make for it let me know. Where else can you set computer programs written for free?

## "TAX AND THE SYSTEM"

The Commissar now has a bulletin #40-83 for SS taxing of computers and software. The general principle is "If doubt, tax it; otherwise tax it anyway." A bit dry, but a must for business users.

MRP Technology, PO Box 340128, Tampa, FL 33694 (813) 961-2595 (after 7 p.m.) has a \$20.00 kit for building a 64K Rampack for a ZX/TS. All parts except 14 IC's and sockets and some resistors, capacitors, diodes - this could be about \$60 worth of stuff.

Dave Dack is looking for a cartridge that plugs into a Magnavox Odyssey 2. Sell cheap or lend him one for a while, c/o Dee.

We have received letters from individuals all over Canada wanting info or asking to join us. Also we have been sent some Commercial fliers, like the one from MRP. However there have been no spiffy groups offering to exchange newsletters since the New York one.

erry Computers, 5344 West Banff, Glenale, AZ 85306, (602) 978-2902, has a Timex catalogue. Examples: 2068 for \$169.95; 2040 for \$89.95. Lots of TS1000 and 2068 software cassettes, from \$3.25 per.

Compusa has a nice controller for \$199. Works with SA400 and similar drives, including Double Sided, Double Density. They say the operating system is compatible with other computers. CP/M?

Thomas B. Hoods, PO Box 64, Jefferson, NH, 03587, (603) 586-7734 has PRO/FILE 68, an advance over the ZX PRO/FILE. The almost 100 page manual is not ready yet, but will be available to all who buy it now at \$29.95.

C-64 users dislike Commodore's version of MicroSoft Basic so much that they are replacing it with COMAL, a very complex language written by Borge Christianson.

Bill Love is alive and well nursing an old system at Barrie Ont., 56 Little Lake Drive, RR#1, (705) 737-4491.

LAST MONTH I PROBABLY HINTED, SO THIS MONTH IS THE RESULT OF THE HINT IN HARD COPY. AND IF THAT DOESN'T MAKE SENSE, THEN MAYBE YOU SHOULD READ THE REST OF THIS.

THE BOOKS YOU BUY, AND THE MANUALS YOU READ, SOMETIMES LET YOU STRUGGLE ALONG, AND EVERY ONCE IN A WHILE YOU COME UP WITH A PROBLEM, AND NO SOLUTION TO BE FOUND.

MAYBE THIS HAS HAPPENED TO YOU; YOU WERE PLAYING "DAS-BOOT", AND THEN YOU TRIED TO LOAD IN "QUEST", OR "VU-FILE", OR "MELTDOWN", AND ALL YOU COULD GET WAS A "K" CURSOR FOR YOUR TROUBLE. BUT, YOU SAY TO YOURSELF, THEY HAVE ALL LOADED O.K. BEFORE. AND AFTER A FEW MORE ATTEMPTS, YOU LOAD IN A PROGRAM THAT YOU COPIED OUT OF A MAGAZINE, AND IT WORKS.

WHY? THERE YOU WERE SITTING CONTEMPLATING THE EARLY DEMISE OF THE HAM-RADIO OPERATOR DOWN THE STREET FOR INJECTING SIGNALS INTO YOUR COMPUTER, OR THE NEXT DOOR NEIGHBOR FOR USING POWER TOOLS AND INJECTING SPIKES INTO THE POWER LINE, NOT REALIZING THAT THE CULPRIT IS YOURSELF.

OH, REALLY? HOW COULD THAT BE? WELL, REMEMBER, THE FIRST REQUIREMENT TO LOAD "DAS-BOOT" WAS TO POKE DOWN RAM-TOP. (POKE 16389,103), (NEW). AND THEN YOU TRIED TO LOAD IN A FULL 16K PROGRAM, AND THERE WAS JUST NOT ENOUGH ROOM. BUT THE PROGRAM FROM THE MAGAZINE WAS ONLY 9K OR LESS, AND THAT IS WHY IT WENT IN.

THIS IS WHERE "RAND USR 0" IS VERY HELPFUL. IT BEATS WEAR AND TEAR ON THE 9-VOLT JACK ON YOUR COMPUTER. IN OTHER WORDS, RAND USR 0 DOES THE SAME THING AS UNPLUGGING YOUR COMPUTER, AND PLUGGING IT BACK IN, BUT SOMETIMES A LOT EASIER, ESPECIALLY IF YOU HAVE TO RETUNE YOUR T.V. SET EVERY TIME YOU TURN OFF AND ON.

THIS PROCEDURE WILL EVEN RESET YOUR COMPUTER IF YOU HAVE A PROGRAM IN YOUR SYSTEM WHICH RESIDES "ABOVE-RAM-TOP" SUCH AS "TOOLKIT" OR "ASSEMBLER".

A SPECIAL NOTE FOR PEOPLE WITH 64K, OR 32K MEMORY.

RAND USR 0 DOES NOT, AND I REPEAT, DOES NOT ERASE THE MEMORY IN THE 8K-TO-16K AREA. THAT AREA IS AS SAFE FROM USR 0 AS CAN BE SO FEEL FREE TO CLEAR ALL OTHER MEMORY THIS WAY, AND KEEP YOUR MACHINE CODE INTACT.

FOR THOSE OF YOU WITH 16K RAMPACKS, YOU DO NOT HAVE THE 8-TO-16K AREA. YOU HAVE THE 16K-TO-32K AREA. AND IF THIS CONFUSES YOU, FEEL FREE TO PHONE ME AT 656-5879, EVENINGS, OR WEEKENDS.

WELL, THAT'S IT FOR THIS MONTH. I'LL BE BACK AGAIN NEXT MONTH WITH SOME NEW HINTS, BUT THE USR ROUTINES WILL BE ABANDONED, AS THE REST OF THEM ARE USELESS FOR MOST PEOPLE, AND SERIOUS PROGRAMMERS USUALLY KNOW THEM ANYWAY.

DAVE SKAALRUD

RAND USR 0

# KNITTING PROJECT

Some time ago I challenged the membership to help write a ZX81 program capable of "charting" a knitting project. One would put in the measurements of the victim - the intended recipient of the new sweater - together with some information about stitch and row gauges. The program would then issue instructions about how many stitches to cast on, when to increase or decrease, how to bind off, etc.

To the delight of my knitting wife, I have finally started this. Somewhere in this issue you will find a listing which does actually chart out the back of a sweater with reasonable success. Next I have to do the front and sleeves. Then I will want to add modifications for different neck styles. The whole will be driven from a menu.

In the listing, the menu starts at 1500. There are not many choices on it yet, but there will be more! The essential measurements are put in through the routine at lines 1200-1390, which then returns you to the menu.

Once that is done, the instructions for the back of the sweater start at 2000. Instructions come up a few at a time, and then GOSUB 500 provides a pause, and a message "press any key to continue". This allows the user to make notes before reading the next screen.

When I get around to finishing it, I'm sure it will take Lynne much less long to make me the sweater, which will, of course, be tendered as an exhibit at an upcoming meeting!

Julian Greenwood.

 SACRAMENTO BEFORE MY (BY NOW  
 FREQUENT) PRAYERS WERE ANSWERED.  
 SURE ENOUGH, A LIVING,  
 BREATHING, NOISY, AND COLORFUL  
 2088, IN A FIT OF EXUBERANCE I  
 SPRUNG FOR A NEW 2040 PRINTER.  
 WHAT COULD I DO; THE PRICE WAS  
 RIGHT.

I WILDLY LOOKED AROUND TO  
 FIND PROGRAMS, A MODEM, SPARE  
 PRINTER PAPER,.....AFTER ALL  
 I HAD MONEY LEFT, BUT...NONE.  
 AS I TRAVELLED BACK TOWARDS THE  
 GREAT WHITE NORTH I AGAIN  
 CHECKED PAPERS, STORES, AND  
 MAGAZINES FOR SOURCES, NOT UNTIL  
 PORTLAND, WHERE I HAPPENED UPON  
 A COUPLE OF FRIENDLY SINCLAIR  
 USERS, DID I GET SOME ANSWERS.  
 OTHER THAN THOSE BUSINESSES THAT  
 ADVERTISE IN SYNC OR TS USER  
 (DEALING PRIMARILY BY MAIL)  
 THERE ARE NO READILY AVAILABLE  
 SOURCES FOR TIMEX, AS I HAVE  
 SAID BEFORE IN THIS COLUMN,  
 SUBSCRIBE, SUBSCRIBE.  
 THE ONE PERSON I CONTACTED IN  
 OREGON CITY, CAN SUPPLY SOME  
 GOODIES, BASED ON AVAILABILITY.  
 HIS NAME AND ADDRESS FOLLOW. HE  
 IS A MEMBER OF THE OREGON CITY

USERS GROUP AND THE PORTLAND  
 GROUP.

ROD GOWEN  
 RMG ENTERPRISES  
 1413 1/2 7TH ST.  
 OREGON CITY, OREGON  
 97045

555-7484

THE OTHER CONTACT I MADE WAS  
 WITH A MEMBER OF THE PORTLAND  
 USER GROUP.

KEVIN FOWLER  
 8854 N.E. MULTNOMAH  
 PORTLAND, OREGON  
 97213

253-0844

BOTH GUYS ARE REALLY FRIENDLY,  
 WERE EAGER TO HEAR OF OUR  
 EFFORTS WITH THE CLUB.

SO.... THE 2088 IS EVERYTHING  
 WE'VE HEARD. BRIEFLY... SOUND  
 AND COLOR ARE GOOD. I FOUND IT  
 DISCONCERTING TO HAVE THE  
 COMPUTER MAKE NOISES. THE COLOR  
 REALLY ENHANCES THE PROGRAMS.  
 IT'S A REAL TOOL FOR SHOWING  
 OFF. THOSE WITH C64 OR TI-99  
 EXPERIENCE, IT'S VERY MUCH THE  
 SAME. THE KEYBOARD, THE AUTO  
 REPEAT KEYS, THE EXTRA COMMANDS,  
 THE JOYSTICK PORTS, ALL GREAT.  
 THE DIFFERENCE BETWEEN THE CHEVY  
 AND THE CADILLAC.

BITS AND BYTES  
 \*\*\*\*\*

17000 IS AN OVERBYTE.

DAVE HUSTON AND I DECIDED TO  
 BLOW \$15.00 U.S.) AND ORDER THE  
 LITTLE KEYBOARD ADVERTISED IN  
 SYNC UNDER FILE SIXTY OR THE NEW  
 NAME - SECONDBASE. IT TOOK 3  
 WEEKS TO COME, THERE WAS NO DUTY,  
 AND AS FAR AS I'M CONCERNED IT'S  
 THE NEXT BEST THING TO HOT  
 PORRIDGE. SEE IT AT THE NEXT  
 MEETING. THE NAME OF THE CITY  
 WHERE SECONDBASE RESIDES (NOT  
 MENTIONED IN THE AD) IS ALTOONA,  
 PA.

I DID MANAGE TO BUY SOME NEW  
 AND USEFUL BOOKS FOR BOTH THE  
 ZX81 AND THE 2088, SO IN FUTURE  
 COLUMNS WE'LL HAVE THINGS TO  
 DISCUSS.

I HAVE NOT LAID HANDS ON ANY  
 NEW PROGRAMS, BUT I HEAR THAT  
 THE BIRD BROS. WORD PROCESSING  
 PROGRAM IS ABOUT READY - SO I'M  
 LOOKING FORWARD TO GETTING A  
 COPY.

THAT'S IT FOR THIS MONTH - SEE  
 YOU AT THE MEETING.

P.S. I'LL BRING THE ISSUE OF  
 COMPUTING ELECTRONICS THAT HAS  
 THE ARTICLE ON THE QL. IT LOOKS  
 IMPRESSIVE.

### RADIO SHACK MC10

Last week Dee & I searched through  
 the memory on the MC-10 and found some  
 addresses which will help the MC-10's  
 potential to become known. Included in  
 this issue is a program which demon-  
 strates the graphics potential of this  
 machine. We also found that machine code  
 is possible, and that there are commands  
 which execute machine code which aren't  
 in the manual the MC-10 comes with.

To execute a machine code program  
 one can use the command EXEC, followed  
 by the starting address of the machine  
 code program. This is similar to the  
 Sinclair USR, though it has some  
 differences.

The MC-10 has its own USR function,  
 but with this command you must poke the  
 addresses 16918 and 16919 with the  
 starting address of the machine code.  
 Also the USR function is preceded by a  
 number in brackets which can be used by  
 the machine code being executed.

On the MC-10, when you poke  
 addresses, the most significant byte  
 comes first instead of last.

I would be interested to hear of  
 other discoveries people have made on  
 the MC-10.

Dale Bird.

Try this: (on the MC-10)

10 REM "119" 119

15 N=1  
 20 EXEC 17227  
 30 FOR DELAY = 0 TO 400: NEXT  
 32 PRINT N  
 35 EXEC (65445) N,1  
 40 EXEC 17233  
 50 FOR DELAY = 0 TO 400: NEXT  
 55 N=N+1  
 60 POKE 17228,N  
 80 GOTO 20  
 CSAVE "ZX REM"

Figure 1: extensions to Sinclair Basic

**Channels:**

There are seven channels: the keyboard (k), the screen (s), the ZX printer (p), the text RS232 interface (t), the binary RS232 interface (b), the network (n) and the Microdrive (m).

**Streams:**

These are given by # number where the number can be between 1-15.

**Statements:**

CAT y	Lists all the files in the cartridge in Microdrive y. This shows the name of the cartridge and the number of remaining kilobytes.
CAT #z;y	Sends catalogue of cartridge in Microdrive y to stream z.
CLOSE #stream	Unlinks any channel from the specified stream.
ERASE "m";v;"[name]"	Erases the file with the specified name from the cartridge in Microdrive y.
FORMAT "m";y;"[name]"	Prepares a blank cartridge in Microdrive y for use by Basic.
FORMAT "n";x	Sets the network station number to x.
FORMAT "t";x	Sets the baud rate for the RS232 interface to x.
INKEY \$#stream	Returns a single character as a string if one's available or the null string " " if no character's available from the stream.
INPUT #stream; variable	Inputs the variable from the specified stream.
LOAD * channel options	Loads the programs, data or code from the specified channel. Channels 'b', 'n' and 'm' are the only ones that can be used. All options usually available with LOAD are available with LOAD*.
MERGE * channel options	The same as LOAD except that it doesn't delete old program lines to make way for new ones with the same program line.
MOVE source to destination	Moves data from source to destination. These can be either stream numbers or channels.
OPEN #stream, channel	Links the specified channel to the specified stream to allow Basic input or output to that channel.
PRINT #stream ...	Outputs the print sequence (...) to the specified stream.
SAVE * channel options	Saves the program, data, or code to the specified channel. Only channels 'b', 'n' or 'm' can be used. All facilities available with SAVE are available with SAVE*.
VERIFY * channel options	The same as LOAD except that data is not loaded but is compared with the data already there.

A 32-bit computer for \$499? Clive Sinclair, creator of the \$99 Sinclair computer which was introduced three years ago, plans to unveil such a system this summer. Dubbed the Sinclair QL -- Quantum Leap -- it, like the Apple Macintosh, is based on Motorola's 68000 microchip. Included in the \$499 price will be 128K RAM -- expandable to over one megabyte -- and two microfloppy disk drives, presumably 3½", each with a capacity of 100K. Also bundled are word processing, spreadsheet, database and graphics software programs, along with a full keyboard with five function keys. Color graphics are supported by the system, although a video-display unit is extra. The QL will be incompatible with every other microcomputer on the market, however, with its proprietary QDOS operating system. The system is touted as being multiuser and multitasking.

Should the unit come close to what it claims to possess for the price, the computer industry's price/performance expectations will be completely restructured. (Asian Computer Monthly, March 1984; 22 Wyndham St., Hong Kong.)

If only one person on the net owns a Microdrive then there's a very useful facility called broadcast. What it does is allow one station to send data or programs to all the others on the network and not have to wait for them to input it.

When something is sent on the broadcast channel it's always sent to station 0. So if data's to be sent, the command OPEN#"n";0 is used. Any stations that are reading on the broadcast channel can get what ever is sent on it from any other station. The same applies to programs. Should a user have a program that he thinks everyone should have, then he can save it; SAVE#"n";0 and anyone who enters LOAD#"n";0 will receive it. If no-one loads the program, the sender's computer is not held up as before, but is ready for use straight away as the program is lost.
